## Technical Skills

**Languages:** HTML5, CSS3, JavaScript

**Version Control:** Git, GitHub

**API Integration:** Fetch API, JSON

**Responsive Design:** Media Queries, Flexbox, CSS Grid

**Testing:** Chrome DevTools

**Designing Tools:** Figma, Photoshop

## Languages

English (Upper-Intermediate)

# Mariia Shusharina

Front-end developress  
Podgorica, Montenegro

## Summary

Enthusiastic and communicative Web-developer with strong attention to details. Experienced in Front-end web-development with solid foundation in HTML, CSS and JavaScript.

## About me

I completed the online course "JavaScript / Front-end" stage0 at "The Rolling Scopes School" established by EPAM <https://rs.school/>, and continue learning on the next stages to improve my skills.

My English level is Upper-intermediate (6 or B2.1 by Common European Framework) by exam results at the Oxford Center in Podgorica.

Before the Front-end course, I attended many other learning programs as "HTML & PHP" course at Moscow State University (MSU), while I was at high school.

After graduating from school, I enrolled at MSU at CMC (Computational Mathematics and Cybernetics) on a paid basis but had to leave because of multiple circumstances.

Then, I'd continued studying by self-educating and on free courses and had been learning C++, JavaScript, C# for Game Development on Unity, attended English courses and speaking clubs.

In parallel with studies I had been working as freelancer and as a QA tester for an online-store "Stitch-Shop".

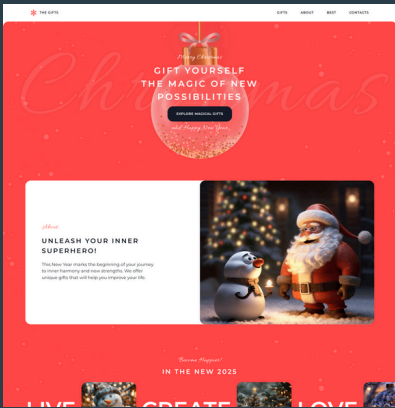

After that experience, I had finally found the course from "Rolling Scopes School" and gained currently relevant experience about front-end web-development.

In addition to useful skills, I have knowledge and experience in working with GitHub, and Figma.

Also, I had practice in photo-redacting and making designs (banners etc., including animated) with Photoshop, digital painting (primarily in Paint Tool SAI), 3D-modelling in Blender.

# Soft Skills

**Communicativeness** - able to discuss objectives to find balanced solutions, eager to share experience or explain technical concepts to non-technicians.

**Attention to details** - responsible about quality of final project with the habit to test my own work.

**User Experience Understanding** - willing to build human-friendly applications, with attention to users' needs.
