Reside in: Montenegro, Herceg-Novi

Citizenship: Russia

Ready to relocate, ready for business trips

Desired position and salary

Backend Developer (Python) Specializations:

— Programmer, developer

Employment: full time, part time, project work

Work schedule: full day, shift schedule, flexible schedule, remote working

travel time to work: any

Work experience —3 years

July 2023 — till now

skillsy

Python Developer

Python 3, Django, Django REST framework, aiogram, Algorithms, SQL, SQLite3, Git. JavaScript, React, Java, Spark. Ubuntu

1. Writing bots in telegram.

Several telegram bots were written, where the following tasks were implemented: Implementing a subscription to the bot and issuing a test version, connecting GPT requests and responses, connecting GPT images, setting up work with the database, connecting payment for the bot subscription.

2. Writing a complex web application for testing human behavior

An application was written in React, with API integration on the Django rest framework allowing the recruiter to create an invitation link through which the user is tested, passes the test, and its results are saved in the database. After which the results are sent to the recruiter by email.

Yandex Practicum

Python developer (training)

Python 3, Django, Django REST framework, Algorithms and data structures, testing(Unitest), ООП, SQL, SQLite3, Git.

Completed training in the Backend development program in Python, during the training the following projects were implemented:

1. Yatube - Social network.

Python 3, Django, SQLite3.

Implemented in MVT style, configured registration, authorization and authentication of users, password recovery via email. The project has the ability to subscribe to an author, like and comment on posts, and display posts by authors that you have subscribed to. Caching enabled.

I wrote tests that check the performance of the server.

GitHub - <https://github.com/Anac0n6a/Yatube>

2. RestAPI for the Yatube project.

Python 3, Django 2.2 LTC, Django REST Framework, SQLite3, Simple JWT.

Wrote and implemented authentication using a JWT token. I also configured access to content and execution of CRUD user requests in accordance with the API documentation.

GitHub - https://github.com/Anac0n6a/api_for_yatube

3. REST API Yamdb - Service for viewing and writing user reviews about films, books and music.

This project was developed in a team of 3 people. I was responsible for working on the comments.

Python 3, Django REST Framework, SQLite 3, Git, Simple-JWT.

GitHub - https://github.com/Anac0n6a/api_yamdb1

4. Project Events-Yandex-bot Telegram bot informing about changes on the site "events.yandex.ru"

Python 3, Python-telegram-bot, beautifulsoup 4.

Reading information from the site, processing the received data, sending a message to the user.

- Restaurant, Food Service Industry, Fast Food

Pastry chef

He completed practical training and internship while training to become a pastry chef.

Trained and practiced in the following restaurants: "Vysotsky", "Steak House", "troekurov", "mojo", "ugli".

He graduated with honors and received a red diploma.

While working, I learned the skill of stress resistance, since you need to cook a lot and do several things at the same time and there is little time for this. I learned to work in a team; the kitchen consists of several chefs. Responsibility, because what you do, you must be responsible for it and you need to do it efficiently. Perseverance, part of this work is monotonous activities.

Education

Vocational secondary

2022

Ekaterinburg Trade and Economic College

pastry chef

Python, Git, SQL, Django Framework, Bash, HTML, Django, pytest, XML, GitHub, JSON, ORM, SQLite, REST, JSON, API, jwt token, JavaScript, React, Java, Spark, Ubuntu

Additional information

About me

In my teens, after school, I went to study to become a chef, but during my studies, I realized that this profession was not for me. I decided to take Yandex.Practicum programming courses because I have been interested in the topic of computers since childhood and I was constantly studying and discovering something new on my own. Python attracted me because the syntax is quite simple and it is not so difficult to understand, especially since it is a very popular language. Before taking the course, I tried to learn the C++ syntax, but it turned out to be very difficult for me when I first got acquainted with programming. But nevertheless, I did not give up and continued on my way. Also in my free time I develop a pet project, a website where the administrator will post posts(photo, video, text), developing an API for it, connecting a telegram bot that will notify site guests that a new post has been published on the site, in the section to which they subscribed.

I live in Montenegro, so I am considering a remote work option or relocation to other countries.

In my previous jobs, I had to do several tasks at the same time, but I coped with both tasks and deadlines, because for me this is a kind of test that I must overcome.

I learn a lot on my own, I've been playing guitar since I was 14, I had my own rock cover band. I like to play computer games and am interested in cinema.
